

HONEYWELL FORGE AND SMARTSKY NETWORKS

Enjoy SmartSky Networks' reliable, secure, ultra-fast coverage powered by Honeywell Forge services and support.

UNRIVALED IN-FLIGHT CONNECTIVITY

Honeywell is now a value added reseller for SmartSky Networks, a U.S. air-to-ground (ATG) in-flight connectivity (IFC) provider. The network takes advantage of patented 4G and 5G technologies such as spectrum reuse, advanced beamforming technologies and 60 MHz of spectrum for significantly enhanced connectivity. SmartSky Networks uniquely enables an experience with unmatched capacity for data transmissions both to and from the aircraft. This real-time, low latency, bidirectional data link makes SmartSky Networks the best in-flight user experience, and a key enabler for Honeywell Forge business aviation operators and airline customers.

UNPARALLELED FEATURES

- Beamforming technology provides every aircraft with its own dedicated beam, prioritizing passenger experience and data security from takeoff to touchdown
- Ultra high-speed connectivity both to and from the aircraft so sending data is equally prioritized to downloading data, translating to better video calls & urgent messages

- Low latency network provides a consistent customer experience for use of cloud-based applications and real-time web interactions
- 20x the spectrum of the average ATG network combined with a unique network architecture that enables a scalable solution to provide the same speeds, regardless of the number of aircraft on the network
- VPN and web conferencing that is compatible with most of today's corporate security standards.
