

HONEYWELL FORGE FOR BUSINESS AVIATION

SERVICES TO IMPROVE OPERATIONS AND CONNECTIVITY

A variety of Honeywell Forge services and applications are available on the platform today – with more to come. Subscribers can use the platform to access In-Flight Connectivity, Flight Planning and Optimization, and Navigational Database services and more.

HONEYWELL FLIGHT SUPPORT EXPERIENCE

	DESCRIPTION	DIFFERENCE
FLIGHT PLANNING	With our latest flight planning platform pilots, can view available routes, create, optimize and file a flight plan in just minutes. Our intuitive software makes life easier for pilots and dispatchers even on complicated international flights.	Best-in-class flight planning through integrated partnerships and connectivity hardware and services. Experienced flight dispatchers are available to help anytime.
FLIGHT DISPATCH SERVICES	Honeywell's concierge-level service that takes flight planning, flight following and problem solving to the next level. Our experienced team helps you create the "no surprises" experience you and your passengers expect – every flight.	Proactive aircraft monitoring and hands on support. Integrated with multiple 3rd party tools. Priority clearances and handling by ATC.
DATALINK COCKPIT COMMUNICATION	Seamless, worldwide, two-way communication between the aircraft and ground. Our datalink services include free text messaging, oceanic and pre-departure clearances, weather information, custom short codes and controller-pilot datalink communication.	Honeywell is the only Datalink provider that offers both ARINC and SITA ground networks as standard.
INTERNATIONAL TRIP SUPPORT	Honeywell makes it easier for operators to plan and manage flights around the world by providing access to an end-to-end combined international flight services capability.	Enables users to order fuel, price handling services, submit trips and review the status of their arranged services.
NAVIGATIONAL DATABASES	Get the latest data and software to make sure you're getting peak performance from your Honeywell navigation systems. We make it fast and easy for you to get the updates you need for your flight management system (FMS) or wireless data LAN management unit (DLMU-W).	Database updates for Honeywell navigation systems built by Honeywell.

HONEYWELL CABIN CONNECTIVITY EXPERIENCE

	DESCRIPTION	DIFFERENCE
CONNECTIVITY SERVICES – AIRTIME	Honeywell has joined forces with a broad spectrum of leading airtime service providers that enables us to develop the right solution for any operator, regardless of mission.	Honeywell Forge Connectivity Services are system agnostic, meaning they work equally well with any airtime service provider. Honeywell airtime also analyzes data consumption to control costs, provides billing and budget management for every operator and offers on-wing intrusion detection options.
HONEYWELL GODIRECT ROUTER	The unit gives you all the speed, performance and reliability of today's best routers in a package that costs less and is smaller, lighter and uses less power.	Optional on-wing intrusion detection. Hotel-style payment options. Real-time device consumption monitoring and idle device removals.
JETWAVE SATELLITE COMMUNICATIONS SYSTEM	JetWave is the hardware that allows you to connect to Inmarsat's Jet ConneX Ka-Band network, the fastest broadband available for business aviation.	Fast, reliable, secure and always available from the moment you climb onboard until you touch down and taxi.

INTEGRATED OPERATOR PORTAL

	DESCRIPTION	DIFFERENCE
HONEYWELL FORGE	Honeywell Forge is our smart, data-driven integrated platform that gives your team what it needs to improve efficiency, reduce costs and create a superior connected experience for flyers.	It's your front door to a comprehensive service portfolio that includes in-flight connectivity, flight planning and optimization, and flight database services in a single seamless platform with a growing list of additional features.
