

The real cost of not being connected when you fly.

Company executives, entrepreneurs and other business jet passengers expect to get connected, stay connected and be as productive at 40,000 feet as they are at home or in the office.

TIME IS VALUABLE

Consider that the average internet user spends about **6.5 hours a day online** and **CEOs spend almost one-fourth of their time on electronic communications**, according to a recent Harvard Business Review study.

THE STAKES ARE HIGH

Consider a team of five senior managers travelling together, earning an average of \$200,000 per year, and taking a five hour trip. If they can't use the Wi-Fi, they'll cost their employer around **\$2,500 in idle time alone**.

WE ARE MORE MOBILE THAN EVER

That same HBS study found that **CEOs do most (53%) of their work someplace other than the office**, which includes time spent travelling on a business jet.

OPTIMIZE ON YOUR PRIVATE JET INVESTMENT

The stakes only go up from there, as a typical annual salary for a **large-company CEO can amount to millions**. Think about the lost opportunity to call on customers, touch base with investors or attend the big sales meeting.

THE SKY IS THE LIMIT

High-speed data connectivity powered by Honeywell's Jetwave allows executives to download reports and presentations, conduct team meetings, **participate in video conferences or Zoom calls**, and more.
