FOR WI-FI RELIABILITY, UNITED WINGS INTERNATIONAL TRUSTS AEROWAVE
Avionics Sales Corporation

“It's extremely important to have a reliable Wi-Fi system in a charter jet. In fact, most businesspeople will not even get on an aircraft that doesn't have a reliable Wi-Fi system.”

Eduardo Marquez, President, United Wings

Overview
When United Wings International first signed on with a charter operator, it had to guarantee the availability of a reliable Wi-Fi system on board. After looking at different options, the aircraft management company determined that BendixKing’s AeroWave 100 was the best fit because of its small antenna, only-pay-for-what-you-use business model and reliable connectivity on the ground and in the air.

Quick Facts
