

## **INCREASE OPERATIONAL SAFETY AND GET YOUR AUTOMATIC DESCENT MODE (ADM) TODAY!**

In the case of rapid depressurization, the time of useful consciousness at 40,000 ft. is only 5 to 10 seconds.

In case of a depressurization at high altitudes, ADM is providing precious time to the pilot to focus on other critical activities while establishing a safe flight path and staying conscious.

Available now for your F2000EASy along with 20 improvements and 5 design enhancements including ease of selecting XPDR/TCAS configuration before takeoff.

**Contact your Honeywell Sales representative or your preferred Dassault Approved partner to get your ADM today.**
