

# HONEYWELL ANTHEM

Honeywell's newest and most advanced flight deck will herald a new age of aviation where connectivity will help enable true autonomy.

## AS INTUITIVE AS A SMARTPHONE, AND PACKED WITH SAFETY FEATURES

- The touch interface is more intuitive than any other cockpit available today – like a move from flip phones to smartphones.
- “Always-on” access to data improves operational efficiency and safety.
- Third-party applications, like advanced weather programs, are easily integrated into cockpit displays.
- Safety features reduce the potential for ground collisions, runway incursions and runway excursions by 50%.
- Pilots see the cleanest and most functional symbology available today.

## CONNECTIVITY CHANGING THE GAME

- The world's first always-on, cloud-connected avionics were designed from the start with connectivity and autonomy as their core tenets.
- Connectivity dramatically reduces pilots' preflight preparation time – by up to 45 minutes per flight.
- Integrates with popular electronic flight bag planning applications to let pilots create and transmit flight plans to the aircraft from anywhere.

## POWERING THE FUTURE OF FLIGHT

- Scalable and customizable for all types of aircraft, from passenger jets to helicopters and new electric and multirotor vehicles of all shapes, sizes and missions.
- Already selected by Vertical Aerospace and Lilium for their vertical takeoff and landing, all-electric aircraft, the VA-X4 and 7-Seater Lilium Jet, respectively.
