Honeywell | Sky Connect Tracker III

SKY CONNECT TRACKER III

is the industry's proven solution for lightweight satellite communications. Worldwide tracking, 2-way messaging, and telephone services are combined with flight data monitoring capabilities to meet new mandates

BENEFITS FOR HELICOPTER OPERATORS

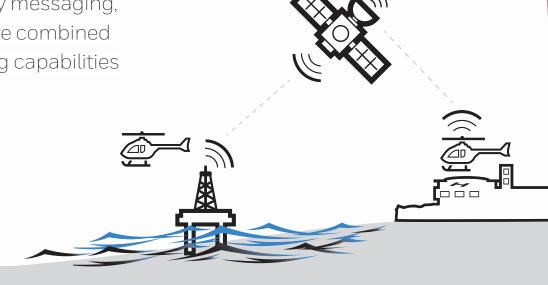

Enhances **safety and operational efficiency** for all aircraft types

Least-cost methods for full-time fleet surveillance to **communicate location and status, supporting air ambulance, search and rescue, firefighting** and mission-oriented operational environments

Data collected for ground maintenance and operations teams help reduce aircraft downtime and increase mission availability

Simultaneous voice, tracking and messaging functions assure 100% operational control and fleet situational awareness even in the most remote areas – anywhere in the world

and fast-fill forms make text messaging an effective way for crews to communicate accurately for routine updates, weather, and dispatch assignments

All position reports, alerts, and text messages are encrypted **using secure data protocols**

Innovative alerting system can automatically send a final position/status report after shutdown or electric bus power loss

Anyone on the ground with authorized access can exchange text messages with the aircraft

Sky Connect Tracker III can integrate with Honeywell's Health and Usage Monitoring System (HUMS), allowing the system to send real-time aircraft health status and maintenance alerts
