THE POWER OF **CONNECTED**

## GoDirect™ Data Control

# You Control the Bandwidth

GoDirect is Honeywell's portfolio of industry-leading services and applications that make life easier for operators, maintenance teams and flight crews. GoDirect™ Data Control enables users of the JetConneX satellite communications network, powered exclusively by Honeywell's JetWave satellite communications hardware, to limit the bandwidth consumed by video streaming without negatively affecting the customer experience.

## Delivering Quality Video at a Lower Cost

Putting high-quality video at your passengers' fingertips used to require a lot of bandwidth and a big budget. Not anymore. Business aircraft owners and operators don't need to subscribe to the most expensive top-tier data plans to provide streaming video access to the cabin, thanks to GoDirect Data Control from Honeywell.

The Honeywell system lets you control the amount of bandwidth that streaming video consumes, enabling you to use less-expensive data plans while still delivering quality videoconferencing and entertainment for passengers. This provides a significant cost benefit to operators and ensures that adequate bandwidth is available for all onboard network, voice and data traffic.

With the only fully redundant, ground-based network available, GoDirect Data Control can provide reliable access to video content anywhere an aircraft flies. Regional hosting of shaping and filtering services also reduces latency and improves the quality of streaming video.

Honeywell puts you in control, with the ability to set parameters and control unwanted bandwidth use. Honeywell continues to expand its GoDirect Data Control capabilities, which soon will include the ability for customers to allocate bandwidth available to various activities.

## Benefits:

- Enables operators to use lower-tier data plans
- Provides a quality passenger onboard video experience
- Assures global access for videoconferencing and entertainment

## **Stream Television on your Aircraft – Anytime and Anywhere**

Today's passengers expect office and home equivalent connectivity whenever and wherever they fly. That means staying in touch with breaking news, watching a movie or catching a favorite team in the big game. With GoDirect Data Control, passengers can stream their favorite program to stay connected and entertained all day every day. Simply pick the streaming service and GoDirect will provide the connectivity to optimize it. We can also help you set up your streaming service.

## **Streaming Across the Globe**

Streaming television doesn't have to be limited to a geographical region. Program options now extend coverage across the world so you can stay connected anywhere you fly. That means no matter what country is your designation you can watch your accounts uninterrupted.

## **IPTV**

Internet protocol television (IPTV) is different from traditional delivery through traditional satellite and cable television formats. As a result, a client media player can begin playing the content (such as a TV channel) almost immediately. This is known as streaming media.

## **Here's what you can Start Watching:**

- Amazon Prime TV
- HBO Now
- Direct TV Now
- Netflix

And more – contact us to get your preferred program setup.
